

# FIGHT IT FORWARD

Recovered from COVID-19? Donate plasma locally to help others.

## 1 Plasma Donation

## 4 Local Patient Treatments

### Who can give:

If you were previously diagnosed with COVID-19 and have fully recovered, your plasma may contain antibodies which could help other critically ill COVID-19 patients. Because your immune system fought off COVID-19, you may have antibodies in you that could help others fight it off too.

Plasma containing the COVID-19 antibody could be designated as convalescent plasma and used to treat patients fighting COVID-19 at Baptist Health Hardin and other partner hospitals.

Baptist Health Hardin has partnered with the Kentucky Blood Center to offer a local plasma donation opportunity.

### Criteria to donate:

- Meet all routine blood donor criteria
- Proof of a positive test for COVID-19 or a positive antibody test
- Recovered from COVID-19, with NO symptoms for at least 21 days
- Special Note: If you were a recipient of convalescent plasma, it must have been over 90 days ago

### About the donation procedure:

- Plasmapheresis procedures take about one hour including a medical history review.

### Interested in participating:

- [Click here](#) if you are interested in being contacted about this program.

### Scheduled Plasma Donation Drive:

- Wednesday, December 2, 2020, Elizabethtown
- Appointment and prescreening are required
